

# Durable Surfaces to Keep Your **Hospitality Spaces** New for Longer

# Australia's Most Durable Door & Wall Protection Systems

Acculine is an Australian owned supplier of Door & Wall protection systems for Hospitality spaces. Our mission is to 'Keep your Building Looking New for Longer'. We do this by designing, manufacturing and supplying the most durable and functional interior protection in Australia. Hospitality spaces are some of the most demanding of environments and need resilient materials to suit the intense circumstances.

## What makes Acculine unique?

### Quality

Acculine know how demanding and busy hospitality environments are. Products need to be durable and robust to stand the test of time. That is why all Acculine Inpro products are backed by a **25 year product durability warranty**.

### Range

Acculine has the widest product and colour range, with over **130 Solid, Woodlands, Patterns and Metallics** colours to blend in with any interior colour scheme. All our colours are matched against Dulux paint equivalents, for easy reference.

### Availability

We pride ourselves on our quick turnaround with **Australia's largest inventory** of Door & Wall protection products. By reducing supply chain dependence from overseas and increasing **in-house manufacture** capabilities, Acculine is the local supplier of choice.

### Service

Do you have a unique challenge that you don't know how to solve? Talk to our team and we can arrange an **onsite consultation** and **site measure**.

Do you **need installation**? Acculine have their own in-house install team and accredited contractors nationwide to assist with installation.

# Door Frame Protection

Door Frame Protection is especially unique to Acculine because it is made as a one-piece wrap (TotalWrap), rather than being made from multiple pieces. It is custom formed to suit the exact dimensions of each door frame.

Spot the full height frame protection

## Durable

One-piece TotalWrap frame protection offers a snug fit that won't separate from the frame, ensuring long-lasting durability. Caulk joints on frame protection constructed from multiple pieces will fail upon impact.

## Attractive

A seamless, one-piece wrap eliminates unsightly caulk joints, providing a sleek and professional appearance.

## Custom Fit

Tailored to the exact dimensions of each door frame, ensuring a precise and secure installation for optimal protection.

Why is one piece better than multiple pieces?

# Measuring for Door Frame Protection

## Full wrap v. half wrap - What is the difference?

Half wraps are primarily installed on the hinge side of doors, enveloping slightly more than half of the frame, making them a standard choice for the hinge sides of single doors and both sides of double doors, which do not have a latch side. In contrast, full wraps are for the latch side of single doors to provide comprehensive protection to the frame's exposed and vulnerable areas. Full wraps are not commonly used on the hinge side, as the portion of the frame not covered is usually shielded by the door leaf.

## What is the process for ordering Door Frame Protection?

- 1 You measure the door frame dimensions and email them to [sales@acculine.com.au](mailto:sales@acculine.com.au).
- 2 Acculine posts you a 2D template of the frame profile within 1 week of receiving sizes, so you can check your dimensions are correct and make any necessary final adjustments.
- 3 Once 2D templates are made to suit the door frame sizes, Acculine goes into production of the actual door frame protectors.

## How much tolerance? Does Acculine add tolerance?

When measuring your door frame, do not add tolerance to the measurements as this will be done by the Acculine team. With some dimensions, the Acculine team rounds up, whilst other dimensions are rounded down. If you are unsure whether to round up or down to the nearest millimetre, show it as .5 and the Acculine team will determine whether the dimension should be rounded up or down.

# Door Protection

## Palladium® Rigid Vinyl Kickplates

Palladium® Rigid Vinyl Door Kickplates provide superior protection for your doors, withstanding heavy use and impact. Designed for durability and style, they safeguard door surfaces from scratches and dents, maintaining a polished appearance. Ideal for high-traffic areas in hotels, they ensure long-lasting door preservation.

Full height rigid vinyl door protection (black)

## Stainless Steel Kickplates

Stainless Steel Door Kickplates offer robust protection against daily wear and tear, resisting scratches, dents, and corrosion. Their sleek, modern look enhances door aesthetics while providing exceptional durability. Perfect for high-traffic hotel environments and back-of-house areas, they maintain door integrity and add a touch of sophistication.

# Corner Guards

## High Impact Corner Guard

High Impact Corner Guards feature a robust two-piece system with an aluminium retainer and a vinyl cover, providing exceptional protection for back-of-house hotel areas. Designed to withstand heavy impacts, they ensure lasting durability and a professional appearance while reducing maintenance costs.

## Stainless Steel Corner Guard

Stainless Steel Corner Guards are perfect for high-traffic hotel areas, offering durable protection and easy maintenance. Their sleek, modern design ensures a polished look and reliable performance in demanding environments, making them an excellent choice for back-of-house applications.

## Flush Mount Corner Guard

Flush Mount Corner Guards provide high impact protection with minimal protrusion, ideal for preserving a clean and sleek hotel interior. Used for full-height applications, these corner guards deliver discreet, durable protection for high-traffic areas, maintaining long-lasting performance and a professional appearance.

Tape-on corner guards (black)

Aluminium powder-coated corner guards (black)

Heavy duty NuTree® corner guard (black)

## Tape-On Corner Guard

The slimline tape-on corner guard is a robust yet unobtrusive corner guard for light to medium duty applications. Rather than thermoformed, it is extruded, giving it greater strength and precision.

## Aluminium Powder-Coated Corner Guard

Aluminium Powder-Coated Corner Guards combine strength and style, offering durable protection with a sleek finish. Ideal for both front-of-house and back-of-house areas in hotels, they resist scratches and impacts while adding a touch of elegance to any interior. Available in any standard Dulux powder coat colour

## NuTree® Corner Guard

Get industrial strength protection in heavy traffic areas with NuTree® Corner Guards. NuTree® provides high-impact protection against damage caused by heavy equipment carts, making it great for loading bays, back-of-house and maintenance areas.

# Crashrails

Protect your walls from scratches, dents, and scrapes with our robust crashrails. Designed to withstand the demands of trolleys and service carts, these wall guards feature an aluminium retainer and an inner bumper covered with a rigid vinyl cover. Maintain a crisp and clean appearance in even the busiest corridors with our continuous, highly durable crashrails, ensuring your walls stay damage-free.

Are you experiencing damage to existing timber crash rails?

Easily wrap existing timber crash rails in Palladium® rigid vinyl with our Eze-Wrap custom crash rail cover that suits most sizes and profiles.

## Stainless Steel/Aluminium Crashrails

Our Stainless Steel and Aluminium Crashrails offer top-notch wall protection for high-traffic back-of-house hotel areas. Engineered to endure impacts from trolleys and service carts, these crash rails ensure your walls remain in pristine condition. The stainless steel option delivers a sleek, easy-to-clean finish, while the aluminium variant provides a lightweight, durable solution with a scratch-resistant powder-coated finish. Both choices are ideal for maintaining a tidy and professional appearance in demanding environments.

## NuTree® Crashrail

NuTree® Crashrails are designed for maximum impact resistance, making them ideal for busy hotel back-of-house areas. Constructed from durable, eco-friendly materials, these wall guards protect against heavy wear and tear from equipment and foot traffic. Their robust design ensures longevity, while seamlessly integrating with various interior styles to maintain a clean and organized look.

NuTree® crashrail (white)

NuTree® crashrail (black)

## DURABLE

Our Nature's Steel material boasts an impressive Janka hardness rating of 15.8kN, exceeding by more than 3x the durability of traditional hardwood timbers such as Victorian Ash and Tasmanian Oak, making it a truly unique natural material.

## SUSTAINABLE

- Products that last longer, are highly renewable, biodegradable and have high carbon-sequestration are the perfect mix for sustainability.
- Bamboo, the heart of Nature's Steel is the fastest growing material on earth, making it a rapidly renewable alternative to slow-growing hardwood timbers.
- Harvesting bamboo shoots does not harm the mother plant, unlike tree harvesting. With the Victorian Government's ban to all logging of native forests, the demand for sustainable alternatives like Nature's Steel is set to rise.
